

# SLEEP AND WELL-BEING FOR YOUNG PEOPLE

Sleep and mental well-being in young people is an important link that can often be overlooked.

Sleep is an essential mechanism that we need to survive. We all need sleep, but no more so than when we're still growing and developing. Sleep and wellbeing go hand in hand.

# SLEEP

Sleep is a really important part of our life.

It helps us to feel well, focused and happy.

Most people experience a bad night's sleep now and again, but if you regularly don't get enough sleep it can really affect how you feel and what you can get done during the day.

## WHY SLEEP MATTERS FOR KIDS

**SLEEP RECHARGES KIDS' BODIES AND BRAINS SO THEY CAN:**

- Feel calm and refreshed.
- Make good choices.
- Have a healthy weight.
- Pay attention in school.
- Remember what they learned.
- Do better in sports.
- Avoid getting hurt.
- Feel good about themselves.

**AFTER 1 OR 2 NIGHTS OF LESS SLEEP, YOUR CHILD MAY:**

- Have more meltdowns.
- Make poor choices.
- Zone out in class.
- Forget what they learned.
- Have trouble with sports and games.
- Get into arguments.

**KIDS WHO ARE SLEEP-DEPRIVED MAY:**

- Feel sad, hopeless, or anxious.
- Become overweight.
- Make risky choices.
- Use cigarettes, alcohol, and drugs.

**HOW MUCH IS ENOUGH?**

9-12 hours for ages 6-12      8-10 hours for ages 13-18

# SLEEPING PATTERNS

Good sleep habits have been shown to improve mood, concentration and improved performance at school. They may also help control overeating and obesity.

Lack of sleep is linked to symptoms of depression such as feeling down, feeling hopeless and being irritable.

Very short sleepers, getting less than 5 hours a night, are more likely to experience long-term mental health issues.

On the other hand, if you're sleeping more than the recommended amount and find it difficult to get up in the morning or still feel tired during the day, something else might be going on.

If you're worried about any aspect of your sleep or experiencing any of the above talk to the staff at our school, our school nurse or your GP.

# HOW MUCH SLEEP DO YOUNG PEOPLE NEED?

Adults love to complain about how tired they always are... But, did you know that children and young people need on average 3-4 hours more sleep than we do? The

NHS recommends:

School age children: 10-11 hours

Teenagers: 9-10 hours

Adults: 6-9 hours

School age children and teenagers lead busy lives. From school learning, extra-curricular activities and sports to homework and seeing their friends, it's no wonder they need all those hours to rest and repair for the next day.

# HEALTHY SLEEP HYGIENE

Aim to go to bed and wake up around the same time each day including weekends. Have a routine.

Turn off screens like your phones, TV and laptops at least 30 minutes before bedtime. The light from screens can stop your brain from producing melatonin – sleep hormone, which is important in helping you get to sleep.

Try not to use your devices as much during the day time, rather go for walks and explore your local area or nature spots.

Turn on “Do not disturb” on mobile phones. These options limit interruptions from your apps and lower the colour light on your phone.

### TIPS FOR TEENS TO PROMOTE A GOOD NIGHT'S SLEEP

-  Try to get up at about the same time each morning.
-  Enjoy some physical activity during the day, preferably outside.
-  Worrying about things at night? Set time aside during the day for problem-solving.
-  Avoid drinking caffeine after 4pm as it's a brain stimulant.
-  Allow time to wind down at night. If you're working or studying, stop at least 30 minutes before bedtime.
-  Avoid phones, tablets and watching TV just before bedtime.

## WHAT CAUSES SLEEP PROBLEMS IN YOUNG PEOPLE?

Like with most health problems, there is no one simple answer to this question. A few common causes, however, include too much caffeine or sugar in their diet, a habit of sleeping very late or very early in the morning, and spending too much time on their phones, video games or computer.

Sometimes, though, sleep problems in children and teenagers can be a sign of a more deeply-rooted mental health issue. This can include anxiety, depression and chronic stress. Please remember to always share your concerns as soon as possible.

# HOW TO HELP IMPROVE CHILDREN'S SLEEP AND MENTAL WELL-BEING

## Warm baths

A warm bath can be extremely therapeutic, and not just for the body, but for the mind too. A bath before bedtime can give young people a time to completely relax, setting them up for a better night's sleep.

## Exercise

Staying active is so important for mental health. Having a physical outlet for pent-up energy can help clear the mind, promoting better sleep. Just make sure that you have been active earlier in the day, and not too close to bed time.

## Diet

Make sure your child is making healthy, balanced food choices. Avoiding too much sugar, cutting out caffeine and not eating too much before bed can all help them sleep better.

## Limit screen-time

It's a good idea to safely put away devices especially in the evening before bedtime. Spending too much time on your phone or laptop before bed will keep your mind active – not what you want when you're trying to sleep! Screen addiction also has negative impacts on young people's mental health and behaviour

# NATURE AND EXERCISE

Getting exercise everyday not only helps people to fall asleep faster but it also helps people to stay in the deep stages of sleep longer. This allows the body to repair itself and wake up feeling rested.

Walking to and walking home from school on a daily basis is a great idea to remain fit and healthy as well as appreciating our environment.

Get plenty of sunshine – Because melatonin is released when it grows dark, stepping out into the sun in the morning is vital for our body to wake and become energised. Fully waking up in the morning will allow your body to correct its sleep cycle and help you feel tired at night.

# SOME TIPS FOR A GOOD NIGHT SLEEP

It's best that you use your bed for sleeping only. Rather than doing your work, watching TV or going online, being in bed can cause your brain to associate bed with being alert and awake.

Ideally your bedroom should be dark, a cool temperature (16-18 degrees) and quiet.

Avoid caffeine and sugary drinks after late afternoon.

Learn the prophetic duas and try to read them before sleeping.

Try and sleep with wudhu.
